

# Dynamic Weather Forecasting for Road Trips

Combining GPS Routes with Weather Forecasts using  
Blazor WASM and Azure Functions

Colin McLean

4/23/2024

Minnesota State University Moorhead

CSIS Department

## Introduction

- ▶ Weather route forecasting web app
- ▶ I'll be covering the following:
  - ▶ Problem
  - ▶ Goal
  - ▶ Technology Used
  - ▶ Solution
  - ▶ Lessons Learned

Weather				
Table Weather Grid Map				
Location	Weather Code	Temperature (°F)	Wind Speed (mph)	Feels Like (°F)
aheim		54.2° F	5.1 mph	50.1° F
Los Angeles		51.4° F	0.8 mph	50.1° F
12:36 PM Glendale		49.4° F	5.4 mph	

# The Problem

- ▶ Typical hourly forecasts:
  - ▶ Useful when you're not moving far.
  - ▶ Not helpful when you're on the move.
- ▶ Workaround:
  - ▶ Cross-reference multiple forecasts
  - ▶ Use radar
- ▶ Problem:
  - ▶ Complex
  - ▶ Prone to errors.

12:00 am	32°		 1%	
1:00 am	32°		 2%	
2:00 am	32°		 2%	
3:00 am	31°		 3%	
4:00 am	30°		 3%	
5:00 am	29°		 2%	
6:00 am	28°		 2%	
7:00 am	28°		 2%	

# The Goal

- ▶ Main Goal
  - ▶ Develop Web App
  - ▶ Combine Route and Weather Data
- ▶ Secondary Goal
  - ▶ Explore emerging web technologies

## Route Data

## Weather Data

Route  
Weather

# Overview of Technology

- ▶ Blazor WASM
  - ▶ Client
- ▶ Azure Functions
  - ▶ Server
- ▶ GitHub
  - ▶ Storage, Deployment

# Blazor WASM

- ▶ What is it?
  - ▶ Interactive Web App
  - ▶ Runs .NET
  - ▶ No Plugins
- ▶ Benefits:
  - ▶ Fast
  - ▶ Allows C#
    - ▶ Unified Code
- ▶ Role:
  - ▶ User Interface
  - ▶ User Interaction

```
public List<WeatherForecast> GetWeatherForecastByTimeAndInterval(
    Route route, int offsetMinutes, int intervalMinutes)
{
    var result = new List<WeatherForecast>();
    // Get the legs that fall within the interval.
    var legs = GetLegsByTimeInterval(route, intervalMinutes);
    // Get the forecast for each leg at the specified time.
    for (int i = 0; i < legs.Count; i++)
    {
        var leg = legs[i];
        // Calculate the index of the forecast for the specified time.
        int index = (i * intervalMinutes + offsetMinutes) / 15;
        var forecast = leg.Forecasts[index];
        result.Add(forecast);
    }
    return result;
}
```

# Azure Functions

- ▶ What is it?
  - ▶ Serverless
  - ▶ Runs code on demand
- ▶ Benefits
  - ▶ Efficient
  - ▶ Hide API keys
- ▶ Role
  - ▶ Retrieves data
    - ▶ Weather Forecasts
    - ▶ GPS Routes

```
try
{
    var route = await routeService.ProcessRoute(start, end);
    var forecasts = await weatherService.GetForecasts(route.SampledWaypoints);

    var result = new JObject
    {
        ["route"] = route.RouteData,
        ["locations"] = route.SampledLocations,
        ["weather"] = forecasts
    };

    return new OkObjectResult(result.ToString());
}
catch (Exception ex)
{
    log.LogError(ex, "Failed to process route and weather");
    return new StatusCodeResult(StatusCode.Status500InternalServerError);
}
```

# GitHub

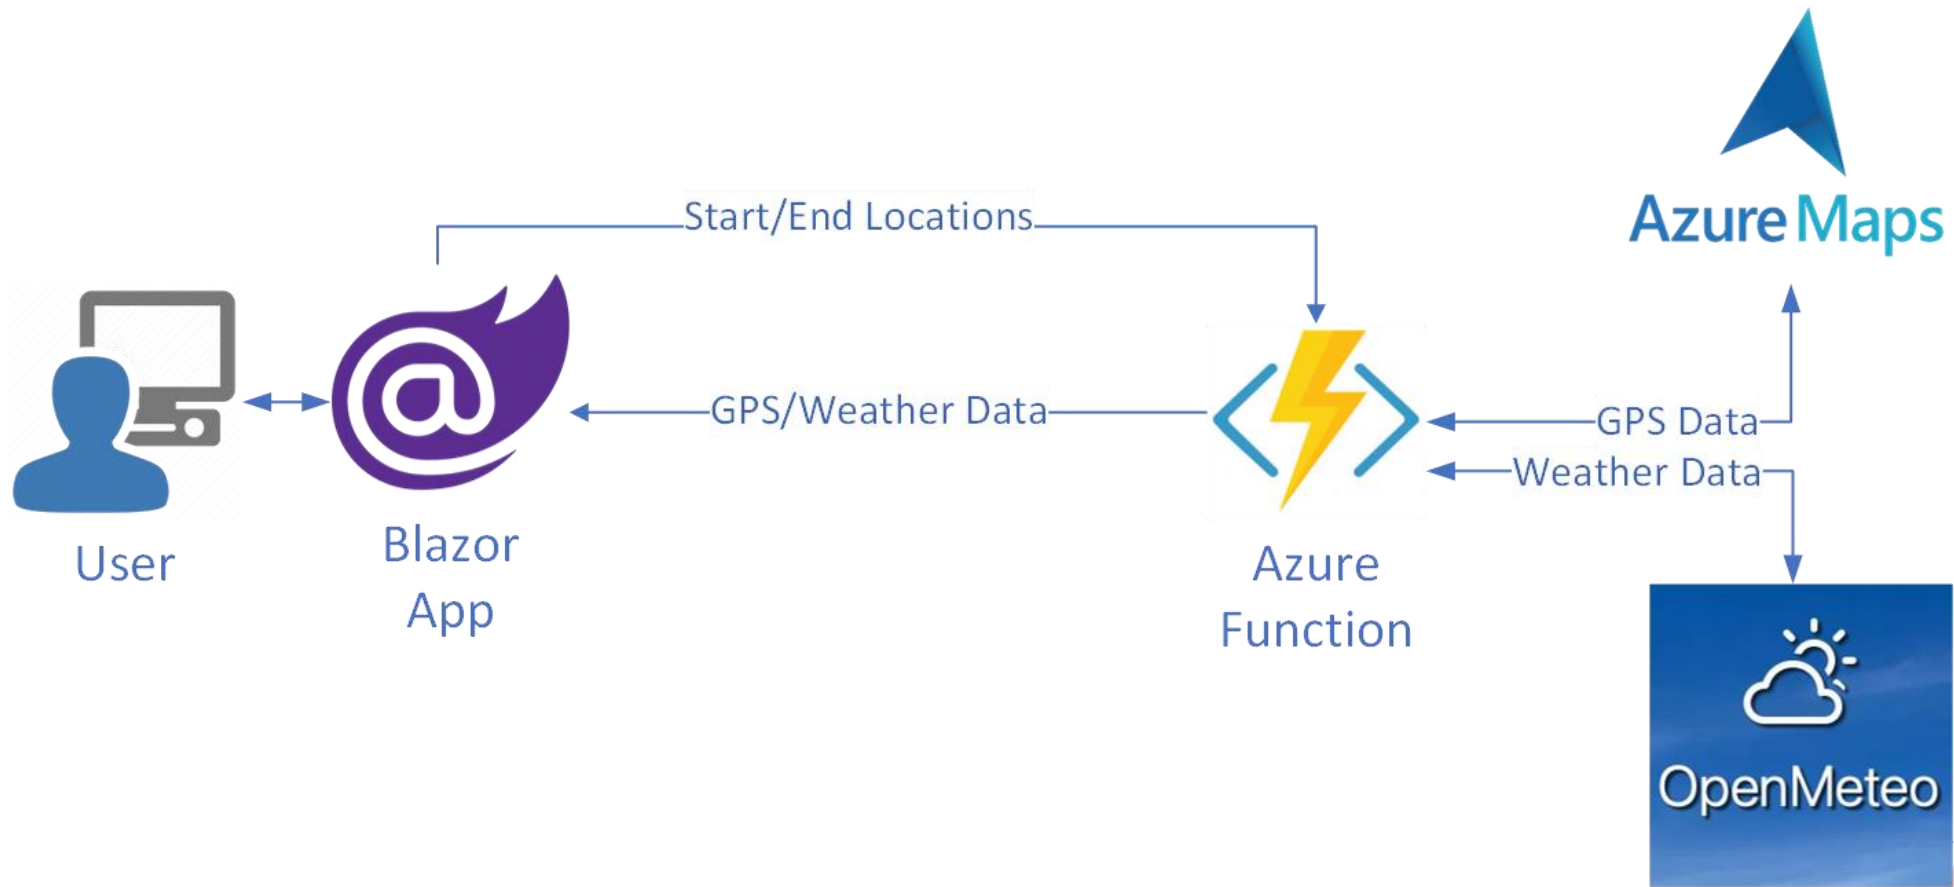

- ▶ What is it?
  - ▶ Code repository
  - ▶ Tracks changes
- ▶ Benefits
  - ▶ Safety
  - ▶ Automated app deployment
- ▶ Role
  - ▶ Stores code
  - ▶ Uploads new app to server

co4715hc Create weather map ✓		f20fe98 · 4 days ago	🕒 24 Commits
📁 .github/workflows	Update azure-static-web-apps-icy-ocean-009ef9110.yml		2 months ago
